

Local Government

Helping local government organisations reap the benefits of the cloud

HighSpeed Office (hSo) is a forward thinking managed network service provider, delivering flexible, cost effective and efficient solutions to our customers. Over the years, we have become a trusted partner to a variety of public sector organisations, including the NHS, local government and central government.

integrated solutions adapted to meet their specific needs. We are proud to offer our services on the Network Services Framework (RM3808) and the Digital Marketplace Framework (G-Cloud 11). In addition, we are HSCN compliant and CAS-T certified.

Secure the best for your network

Together with you, we'll design and implement sector-leading services that improves connectivity across a range of services.

We are keen to help local authorities embark on digital transformation programmes, to deliver improved and efficient services to their residents and businesses. Numerous Local authorities have implemented our suite of

“

MPLS networks used to be a luxury for many smaller local authorities, however increased digitisation of services has meant we need a strong foundation for delivering more cost effective, efficient and resilient public service.

- Andy Singleton. Corporate ICT Manager, Rugby Borough Council

Our range of services

Data Access (RM3808 Lot 1)

hSo is one of a few WAN providers who can combine its own MPLS core with access to all major network operators. Our innovative MPLS network platform provides a reliable, predictable and flexible ICT infrastructure.

Our Data Access services can be grouped into five main categories:

- End-to-end data access services
- WAN and ISP services
- Point-to-Point connectivity
- Connectivity to Public Clouds such as AWS & Azure
- Partnership connectivity to Crown Hosting Data Centre

If you're looking to provide an enhanced internet provision to support cloud services, or just looking to improve your current digital services, our MPLS network provides a reliable service for WAN design, implementation, management and monitoring.

Traditional Telephony (RM1045 Lot 3)

The legacy option- make better use of your existing PBX

We appreciate that standard phone lines and ISDN circuits are still going strong, and you may wish to retain your legacy on-site PBX. However, if you do choose to make the switch to VoIP, we'll make it as easy and painless as possible.

Key features:

- Lower your call charges – via Carrier Pre-selection (CPS) and bundle packages
- Reduce your line rental – cut the cost of your circuits
- Reliable SIP Trunking – port your existing numbers when you switch
- Service robustness – built on configuration techniques, such as geographically separated soft-switches in multiple data centres
- Direct Dial-ins (DDS)

Virtual Data Centre (G-Cloud 11 Framework)

The hSo Virtual Data Centre is a scalable cloud computing platform, providing on-demand storage, server resources and applications. It Integrates with your existing IT infrastructure as a cloud-based extension to your network.

With the same resources of a physical data centre, RAM, CPU and storage can be allocated as required.

Security

- Unified Threat Management
- Hosted Firewalls & VPNs
- Denial of Service Protection
- Email and Web filtering

Complete Solution

We can combine SIP with leased lines, WAN, and internet access, to deliver an integrated, converged solution.

Cost-effectiveness

Local authorities benefit from a hSo solution with significant cost savings, including use of SIP.

Other services you may be interested:

- Cloud migration and connectivity (to Azure, AWS)
- Managed Internet Peering Platform (MIPP)

We were not expecting the solution to be so affordable when we received our tender response from hSo. hSo's response was not only the most suitable one for use in the future but was more cost-effective than all the other bidders.

- Fiona Kirkham. Head of IT, Taunton Deane Borough Council
